## Recommended Citation

Grant, Jed, "Toxicologic Emergencies" (2015). *Physician Assistant Program Faculty Presentations*. 7.  
<https://scholarlycommons.pacific.edu/pa-facpres/7>

This Conference Presentation is brought to you for free and open access by the Arthur A. Dugoni School of Dentistry at Scholarly Commons. It has been accepted for inclusion in Physician Assistant Program Faculty Presentations by an authorized administrator of Scholarly Commons. For more information, please contact [mgibney@pacific.edu](mailto:mgibney@pacific.edu).

	<h2>Toxicologic Emergencies</h2> <p>Jed Grant, MPAS, PA-C Staff PA, Emergency Department, Mercy San Juan Medical Center, Sacramento, CA Assistant Professor, University of the Pacific PA Program, Sacramento, CA Vice President, Physician Assistant Board, State of CA</p>

---

---

---

---

---

---

---

---

	<h2>Objectives</h2>
	<ul style="list-style-type: none"><li>■ Develop an appropriate approach to a toxicologic emergency</li><li>■ Recognize common toxidromes</li><li>■ Review treatment of common toxicologic emergencies</li></ul>

---

---

---

---

---

---

---

---

	<h2>Priorities</h2>
	<ul style="list-style-type: none"><li>■ <u>YOUR SAFETY</u>- are first responders sx?</li><li>■ Airway<ul style="list-style-type: none"><li>- Intubate if no gag reflex</li></ul></li><li>■ ABG/pH</li><li>■ IV access<ul style="list-style-type: none"><li>- CBC, CMP</li></ul></li><li>■ Coma cocktail<ul style="list-style-type: none"><li>- Thiamine 100mg IM/IV</li><li>- D50</li><li>- Narcan 1-2 mg up to 10-20mg</li></ul></li></ul>

---

---

---

---

---

---

---

---

	<b>Priorities</b>
	<ul style="list-style-type: none"><li>■ Circulation<ul style="list-style-type: none"><li>- 20ml/kg bolus of crystalloid</li><li>- 5-15 mcg/min dopamine</li><li>- If not normotensive, central monitoring</li></ul></li><li>■ Treat seizures<ul style="list-style-type: none"><li>- Diazepam 0.1-0.2mg/kg</li><li>- Lorazepam 0.05mg/kg</li><li>- Phenobarbital 20mg/kg</li><li>- Phenytoin doesn't usually work</li></ul></li></ul>

---

---

---

---

---

---

---

---

	<b>Priorities</b>
	<ul style="list-style-type: none"><li>■ 12 Lead EKG, monitor<ul style="list-style-type: none"><li>- Note intervals</li></ul></li><li>■ Gastric decompression<ul style="list-style-type: none"><li>- NG or OG for activated charcoal 1g/kg if ingestion within one hour</li></ul></li><li>■ What else emergently<ul style="list-style-type: none"><li>- Head trauma?</li><li>- Other traumatic cause for shock?</li><li>- Metabolic disorders (hypo Na, Glu)</li><li>- Temp high or low?</li></ul></li></ul>

---

---

---

---

---

---

---

---

	<b>Toxidromes</b>
	<ul style="list-style-type: none"><li>■ After Vital signs look at the patient</li><li>■ EYE<ul style="list-style-type: none"><li>- Pupils big or small?</li></ul></li><li>■ SKIN<ul style="list-style-type: none"><li>- Moist, dry, red, hot?</li></ul></li><li>■ NEURO<ul style="list-style-type: none"><li>- ALOC, happy, mad, sleepy, hyper?</li></ul></li></ul>

---

---

---

---

---

---

---

---

TYPE	EXAMPLES	PHYSICAL EXAM	OTHER S/SX	TREATMENT
Opioid	Heroin, Morphine	Miosis, resp and CNS depression	Hypothermia, bradycardia, Pulm edema	Naloxone, ventilate
Sympathomimetic	Cocaine Amphetamines	Agitation, mydriasis, HTN, tachycardia, fever	Sz, Rhabdo, ACS	Cooling, sedation (benzos) hydration
Cholinergic	Organophosphate Carbamate Insecticides	SLUDGE, bronchorrhea, fasciculations	Bradycardia, sz, paralysis, resp. failure	Airway/vent Atropine Pralidoxime
Anticholinergic	Scopolamine Atropine, plants	AMS, mydriasis, dry red skin & mouth	Urinary retention, Sz, dysrhythmias, hyperthermia	Physostigmine, Benzos, cooling
Salicylates	ASA, wintergreen oil	AMS, tinnitus, hyperpnea, tachycardia, diaphoresis, NV	Low grade fever, ketonuria, metabolic acidosis/resp alk	MDAC, alkalize urine, dialysis, hydration
Hypoglycemia	Sulfonylureas Insulin	AMS, diaphoresis, tachycardia, HTN	Slurred speech, bizarre behavior, Sz, paralysis	D50, oral feeding if able
Serotonin syndrome	SSRI, MAOI, TCA, amphetamine	AMS, increased muscle tone, hyperreflexia	Hyperthermia, "wet dog shakes" (intermittent rigors)	Cooling, benzos, cyproheptadine?

---

---

---

---

---

---

---

---

	<b>Enhancing Elimination</b>
	<ul style="list-style-type: none"> <li>■ <b>Based on understanding pharmacodynamics of drug involved</b> <ul style="list-style-type: none"> <li>– Should be directed by poison control</li> </ul> </li> <li>■ <b>Diuresis and pH manipulations</b></li> <li>■ <b>Hemodialysis</b></li> <li>■ <b>Hemoperfusion</b></li> <li>■ <b>Repeated doses of charcoal</b></li> <li>■ <b>Lipid emulsion</b></li> </ul>

---

---

---

---

---

---

---

---

	<b>Antidotes</b>
	<ul style="list-style-type: none"><li>■ Acetaminophen – acetylcysteine</li><li>■ Anticholinergics – physostigmine</li><li>■ Anticholinesterases – atropine, pralidoxime</li><li>■ Benzodiazepines – flumazenil</li><li>■ Beta blockers – glucagon</li><li>■ Calcium channel blockers – calcium</li><li>■ Opiates - naloxone</li><li>■ CO – O2</li><li>■ Cyanide – sodium nitrite, sodium thiosulfate, B12</li><li>■ Digoxin – digibind (Ab)</li><li>■ Heavy metals – chelation</li><li>■ Isoniazid – Pyridoxine (B6)</li><li>■ Methanol/Ethylene glycol – ethanol, folate, 4 methyl pyrazole</li><li>■ TCA – HCO3</li></ul>

---

---

---

---

---

---

---

---

	<b>Charcoal</b>
	<ul style="list-style-type: none"><li>■ Obtunded<ul style="list-style-type: none"><li>– Intubate prior to charcoal, give via NG/OG tube</li><li>– Helps prevent aspiration</li></ul></li><li>■ Awake/Alert<ul style="list-style-type: none"><li>– Drink it!</li></ul></li><li>■ Lethargic<ul style="list-style-type: none"><li>– Best to just secure the airway</li></ul></li></ul>

---

---

---

---

---

---

---

---

	<b>Seizures</b>
	<ul style="list-style-type: none"><li>■ Sz caused by poisons are not focal and do not have asymmetric neurologic findings</li><li>■ Consider meningitis and LP</li><li>■ Consider ICH, hyponatremia, hypoglycemia</li><li>■ Tx generally same as other causes<ul style="list-style-type: none"><li>– Airway, anti-convulsants, correct acidosis, hypoxemia, electrolyte abnormalities, and hyperthermia</li></ul></li></ul>

---

---

---

---

---

---

---

---

	<b>Seizures</b>
	<ul style="list-style-type: none"><li>■ IF SZ are refractory<ul style="list-style-type: none"><li>- Consider HD or hemoperfusion for theophylline, Li, or salicylate OD</li><li>- Pyridoxine 1g per gram of INH ingested IV</li><li>- Atropine and pralidoxime if suspected organophosphate/cholinergic toxidrome</li><li>- Physostigmine if anticholinergic toxidrome</li></ul></li></ul>

---

---

---

---

---

---

---

---

	<b>Hypotension</b>
	<ul style="list-style-type: none"><li>■ Common problem<ul style="list-style-type: none"><li>- Beware occult trauma/sepsis</li></ul></li><li>■ Try a 1L bolus NS if no pulmonary edema</li><li>■ If not responding to fluids and temperature correction, consider pressors</li><li>■ Central pressure monitoring needed if refractory</li></ul>

---

---

---

---

---

---

---

---

	<b>Hyperthermia</b>
	<ul style="list-style-type: none"><li>■ Salicylates<ul style="list-style-type: none"><li>- Uncouples oxidative phosphorylation, resulting in inefficient (heat generating) production of ATP</li></ul></li><li>■ Phenothiazines<ul style="list-style-type: none"><li>- Inhibit the autoregulatory ability of the CNS, leading to environmentally induced hypo/hyperthermia</li></ul></li><li>■ Sz/Hyperactivity<ul style="list-style-type: none"><li>- Hyperthermia is common after Sz or extreme hyperactivity (especially if patient is forcibly restrained) following PCP, cocaine, or amphetamines.</li></ul></li><li>■ Anticholinergics<ul style="list-style-type: none"><li>- Inhibit sweating</li></ul></li><li>■ TREATMENT<ul style="list-style-type: none"><li>- Active cooling, benzodiazepines, or RSI with neuromuscular paralysis</li></ul></li></ul>

---

---

---

---

---

---

---

---

	<b>Delayed Severe Toxicity</b>
	<ul style="list-style-type: none"> <li>■ Acetaminophen and delayed release drugs among others</li> <li>■ Observe for longer             <ul style="list-style-type: none"> <li>– Minimum 4-6 hours</li> <li>– Usually warrant admission</li> </ul> </li> </ul>

---

---

---

---

---

---

---

---

	<b>Delayed Severe Toxicity</b>																		
	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="background-color: #333; color: white;">Poison</th> <th style="background-color: #333; color: white;">Delayed effect</th> </tr> </thead> <tbody> <tr><td>Acetaminophen</td><td>Hepatic necrosis</td></tr> <tr><td>Amanita mushrooms</td><td>Hepatic necrosis</td></tr> <tr><td>Carbon tetrachloride</td><td>Hepatic and renal damage</td></tr> <tr><td>Methanol</td><td>Blindness</td></tr> <tr><td>Paraquat</td><td>Pulmonary fibrosis</td></tr> <tr><td>Super-warfarins</td><td>Bleeding</td></tr> <tr><td>Thallium</td><td>Peripheral neuropathy, hair loss</td></tr> <tr><td>Ethylene glycol</td><td>Renal failure</td></tr> </tbody> </table>	Poison	Delayed effect	Acetaminophen	Hepatic necrosis	Amanita mushrooms	Hepatic necrosis	Carbon tetrachloride	Hepatic and renal damage	Methanol	Blindness	Paraquat	Pulmonary fibrosis	Super-warfarins	Bleeding	Thallium	Peripheral neuropathy, hair loss	Ethylene glycol	Renal failure
Poison	Delayed effect																		
Acetaminophen	Hepatic necrosis																		
Amanita mushrooms	Hepatic necrosis																		
Carbon tetrachloride	Hepatic and renal damage																		
Methanol	Blindness																		
Paraquat	Pulmonary fibrosis																		
Super-warfarins	Bleeding																		
Thallium	Peripheral neuropathy, hair loss																		
Ethylene glycol	Renal failure																		

---

---

---

---

---

---

---

---

	<b>Acetaminophen</b>
	<ul style="list-style-type: none"> <li>■ Toxic dose             <ul style="list-style-type: none"> <li>– 150mg/kg in kids</li> <li>– 7g in adults</li> </ul> </li> <li>■ Initially Asx, maybe nausea, RUQ pain</li> <li>■ 4 hr level, plot on nomogram. Get another level at 6 hrs             <ul style="list-style-type: none"> <li>– Most say give NAC if any rise</li> </ul> </li> <li>■ Get salicylate levels</li> </ul>

---

---

---

---

---

---

---

---

	<b>Amphetamines</b>
	<ul style="list-style-type: none"><li>■ Sympathomimetics/CNS stimulants</li><li>■ Supportive treatment, no antidote</li><li>■ Control Sz, temp, BP and arrhythmias</li><li>■ Benzo, propranolol, consider cardiac w/u</li><li>■ Cooling</li></ul>

---

---

---

---

---

---

---

---

	<b>Anticholinergics</b>
	<ul style="list-style-type: none"><li>■ Blind as a bat</li><li>■ Hot as hades</li><li>■ Red as a beet</li><li>■ Dry as a bone</li><li>■ Mad as a hatter</li><li>■ Supportive treatment, physostigmine for major problems</li></ul>

---

---

---

---

---

---

---

---

	<b>Antidepressants</b>
	<ul style="list-style-type: none"><li>■ TCA, SSRI, MAOI</li><li>■ Anticholinergic symptoms</li><li>■ Cardiovascular sx are frequently life threatening<ul style="list-style-type: none"><li>- QRS widening</li><li>- Profound hypotension</li><li>- AV blocks</li><li>- Ventricular arrhythmias</li></ul></li></ul>

---

---

---

---

---

---

---

---

	<b>Beta Blockers</b>
	<ul style="list-style-type: none"><li>■ Hypotension, bradycardia, bronchoconstriction</li><li>■ Fluids, glucagon</li><li>■ Pacing may be required</li></ul>

---

---

---

---

---

---

---

---

	<b>Calcium Channel Blockers</b>
	<ul style="list-style-type: none"><li>■ Hypotension, bradycardia, CNS depression</li><li>■ Supportive treatment</li><li>■ Calcium, glucagon</li></ul>

---

---

---

---

---

---

---

---

	<b>Carbon Monoxide</b>
	<ul style="list-style-type: none"><li>■ Binds with great affinity to Hgb</li><li>■ Severe tissue hypoxia results</li><li>■ Carboxyhemoglobin levels correlate with severity of symptoms and should guide treatment</li><li>■ 100% O2 high flow via NRB mask</li><li>■ Hyperbaric oxygen in severe cases</li></ul>

---

---

---

---

---

---

---

---

	<h3>Cardiac glycosides</h3>
	<ul style="list-style-type: none"> <li>■ Rhythm and conduction disruption</li> <li>■ Hyperkalemia, maybe yellow vision</li> <li>■ Dig level, K level indicate severity acutely                             <ul style="list-style-type: none"> <li>– Cardiac sx may be delayed</li> <li>– Admit them all</li> </ul> </li> <li>■ Consider antibodies to Digoxin (DigiBind)</li> </ul>

---

---

---

---

---

---

---

---

	<h3>Caustics</h3>
	<ul style="list-style-type: none"> <li>■ Acids coagulate tissue</li> <li>■ Alkalines cause liquifaction</li> <li>■ Dilute with water, milk, or NS</li> <li>■ Supportive tx</li> <li>■ Need endoscopy</li> </ul>

---

---

---

---

---

---

---

---

	<h3>Cocaine/Local anesthetics</h3>
	<ul style="list-style-type: none"> <li>■ Local anesthetics                             <ul style="list-style-type: none"> <li>– Initial CNS excitement and SZ, then CNS depression</li> </ul> </li> <li>■ Cocaine                             <ul style="list-style-type: none"> <li>– Sympathetic hyperactivity with severe hypertension, hyperthermia, ACS, and aortic dissection</li> </ul> </li> <li>■ Supportive treatment aimed at symptoms.</li> </ul>

---

---

---

---

---

---

---

---

	<b>Cyanide</b>
	<ul style="list-style-type: none"><li>■ Cellular asphyxiant</li><li>■ Frequently immediately fatal</li><li>■ Hypotension</li><li>■ Mild: O2</li><li>■ Severe<ul style="list-style-type: none"><li>– Sodium nitrite, amyl nitrite, sodium thiosulfate</li></ul></li><li>■ Don't bother with a cyanide level</li></ul>

---

---

---

---

---

---

---

---

	<b>Methemoglobinemia</b>
	<ul style="list-style-type: none"><li>■ Occurs when iron changes from ferrous to ferric form in hemoglobin</li><li>■ Can't bind oxygen or CO2</li><li>■ Tissue hypoxia</li><li>■ Sx correlate with severity<ul style="list-style-type: none"><li>– Cyanosis, dyspnea, CNS depression</li></ul></li><li>■ Methylene blue is treatment</li></ul>

---

---

---

---

---

---

---

---

	<b>Ethanol</b>
	<ul style="list-style-type: none"><li>■ Ethanol, methanol, ethylene glycol, isopropanol are all CNS depressants</li><li>■ Levels of all should be obtained, but poorly correlate to sx</li><li>■ ETOH- glucose, thiamine</li><li>■ Methanol/Ethylene glycol- ethanol drip or fomepizole</li><li>■ Isopropanol – supportive, maybe HD</li></ul>

---

---

---

---

---

---

---

---

	<b>Hydrocarbons</b>
	<ul style="list-style-type: none"><li>■ Choking or gagging following ingestion</li><li>■ Hypoxia</li><li>■ Delayed (4-6 hrs) physical findings</li><li>■ Chemical pneumonitis (infiltrates) seen on CXR</li></ul>

---

---

---

---

---

---

---

---

	<b>Inhalants</b>
	<ul style="list-style-type: none"><li>■ Hypoxia</li><li>■ Irritation of upper airway and conjunctiva<ul style="list-style-type: none"><li>- Be ready to intubate</li></ul></li><li>■ Chemical pneumonitis and pulmonary edema</li></ul>

---

---

---

---

---

---

---

---

	<b>Iron</b>
	<ul style="list-style-type: none"><li>■ Widely varied symptoms</li><li>■ Levels should be obtained and guide treatment</li><li>■ Chelation therapy</li></ul>

---

---

---

---

---

---

---

---

	<b>Isoniazid</b>
	<ul style="list-style-type: none"><li>■ Sz, metabolic acidosis, coma</li><li>■ Sz may be refractory to benzos<ul style="list-style-type: none"><li>– Try B6 gram for gram</li></ul></li><li>■ Toxic dose 80-100mg/kg</li></ul>

---

---

---

---

---

---

---

---

	<b>Lithium</b>
	<ul style="list-style-type: none"><li>■ Apathy, lethargy, tremor, slurred speech, ataxia</li><li>■ If severe, choreoathetosis, sz, and coma</li><li>■ Toxicity usually accidental due to interaction with diuretic therapy and dehydration</li><li>■ Li levels &gt;2mEq/L usually toxic</li></ul>

---

---

---

---

---

---

---

---

	<b>Opiates</b>
	<ul style="list-style-type: none"><li>■ Sedation, hypotension, bradycardia, hypothermia and respiratory depression</li><li>■ Response to naloxone confirms</li><li>■ Watch due to 1/2 life differences</li></ul>

---

---

---

---

---

---

---

---

	<b>Cholinesterase inhibitors</b>
	<ul style="list-style-type: none"><li>■ Salivation/Sz</li><li>■ Lacrimation, Miosis</li><li>■ Urination</li><li>■ Diarrhea/Dyspnea (Bronchorrhea)</li><li>■ GI pain/emesis</li><li>■ Excitation of muscles/fasciculation</li><li>■ Death from respiratory depression</li><li>■ Atropine, pralidoxime</li></ul>

---

---

---

---

---

---

---

---

	<b>Phencyclidine</b>
	<ul style="list-style-type: none"><li>■ Vertical, horizontal, and sometimes rotary nystagmus</li><li>■ Zombies</li><li>■ Hyperthermia, rhabdomyolysis</li></ul>

---

---

---

---

---

---

---

---

	<b>Phenothiazines</b>
	<ul style="list-style-type: none"><li>■ Extrapyramidal side effects<ul style="list-style-type: none"><li>– Dystonia, orofacial spasm</li></ul></li><li>■ Sedation, miosis, hypotension common</li><li>■ Coma, sz, ventricular arrhythmias may occur in large ingestions</li><li>■ Cogentin, cardiac monitor</li></ul>

---

---

---

---

---

---

---

---

	<b>Poisonous Mushrooms</b>
	<ul style="list-style-type: none"><li>■ Delayed onset of symptoms</li><li>■ GI upset at 6-12 hours suggests toxic ingestion of mushrooms</li></ul>

---

---

---

---

---

---

---

---

	<b>Poisonous Plants</b>
	<ul style="list-style-type: none"><li>■ There's a bunch of them.</li><li>■ Essential to identify plant<ul style="list-style-type: none"><li>- Photos very helpful</li></ul></li><li>■ Sx depend on plant ingested</li></ul>

---

---

---

---

---

---

---

---

	<b>Salicylates</b>
	<ul style="list-style-type: none"><li>■ NV and hyperventilation</li><li>■ Respiratory alkalosis followed by a anion gap metabolic acidosis creating mixed picture</li><li>■ Tinnitus</li><li>■ Hypoglycemia prominent in children</li></ul>

---

---

---

---

---

---

---

---

	<b>Sedative hypnotics</b>
