BARRACK SCHOOLS ARE TEMPORARY

With the arrival on the project of Martin F. Guzman's, Elementary School, Principal, and Floyd Wilder, High School Principal, plans are progressing rapidly for the opening of schools at an early date as possible. The opening of the school will be determined largely by the time the living quarters for the teaching staff can be provided.

Inasmuch as the building of the school will be done by the colonists themselves, under the supervision of the Construction Engineers, it has been decided at the Regional Office that certain barracks will be used in the project as temporary housing for the schools. Block 66 has been assigned to the Junior-Senior High School, and recreation hall, 3706, will house the library.

Five barracks will be provided in Block 72; five barracks in Block 50, and the recreation halls in 35, 36, 37, and 38 will house the three elementary schools. Apartments 3706 C & D will be used for temporary offices for Mr. Guzman; and Mr. Wilder will have the administrative offices in the high school block.

The buildings are being altered to provide adequate classrooms and are being sealed with sheet rock to make them comfortable for school use.

**SUNDAY, JULY 26, 1942**

In the absence of Dr. J. C. Sleathe, who had been scheduled to speak at the first Public Health Lecture last Monday evening, Dr. A. B. Carson, supervisor of the clinic, reported on the former’s findings on sanitation in this community.

Dr. Carson outlined the problems of public sanitation in this community as twofold: one, closeness of livelihood here demands vigilant guard against the spread of communicable diseases; and, two, common use of many facilities demands thoughtfulness and understanding by each person in use of these facilities. He mentioned the work of the sanitation crew, headed by Biki Matsutuji, in keeping up sanitation standards in messhalls, toilets and showers, laundries, and the community at large. Screens for the meshhall garbage are of too large mesh to keep out flies, and effort is being made to change them.

With regard to athlete’s foot, Dr. Carson declared: “Hyochlorine solutions at the entrance to showers would probably not be effective, and the use of the ‘gota’ should be encouraged.” He also warned parents of children who walk outdoors with bare feet: “There is reason to believe that tetanus spores are abundant in the soil here. Without immunization, tetanus infections are fifty percent fatal. Tell your children to keep their shoes on.”

**The next public health lecture is scheduled for Monday, Aug. 3.**
