The song of our Indian guide, who was perched on a stake over our heads, and our passage of the high mountain peaks, over which the snows were waving, filled us with awe and wonder. After we had passed several miles, the boy sang another song, and we were told that we were approaching a place of great beauty. We could not resist the temptation to see this place, and we continued our journey, hoping to find something worth while.

As we approached the place, the guide pointed towards a distant mountain range. We saw a beautiful waterfall, which was surrounded by trees and flowers. We were amazed by the beauty of the place and decided to rest for a while before continuing our journey.

After a short rest, we continued our journey, following the guide's instructions. We saw many beautiful waterfalls and streams along the way. The guide told us that this was a place where many Indians used to gather to trade and exchange goods.

The guide also told us about a place where we could see a beautiful glacier. We were eager to see it, and we continued our journey until we reached a place where we could see the glacier. It was a beautiful sight, and we were amazed by its beauty.

After we had reached the place, the guide told us that we could see the glacier from a distance. We continued our journey, following the guide's instructions. We saw many beautiful waterfalls and streams along the way. The guide told us that this was a place where many Indians used to gather to trade and exchange goods.

G riff on and on, the scenery becoming more and more grand, the-Yosemite Valley, a region of dimensions as well as more sublime in dimension as in extent. The ground is diversified with numerous cones, domes and hills; the latter are ornamented with rare and lovely flowers, and the cones and domes are topiary-like, and all covered with the bright verdure of the age.

The Yosemite Valley is about 7 miles long, and the largest part of it about 3 miles wide. The valley is a continuation of a great depression, which extends from the Sierra Nevada mountains, and is separated from them by a range of peaks, the highest of which, the Cathedral Rocks, is about 12,000 feet above the level of the sea.
