John Muir has written a magnificent description of a great earthquake he once witnessed in the Yosemite Valley. It is a most graphic and descriptive account of the effects of the earthquake as he saw them, and it should be read by all readers of scientific books. The article is published in the "Atlantic Magazine" for April. It is copyrighted, but is republished here for the benefit of the readers of the Sunday Examiner.

The object of the article is to show how the grand talus system of the Yosemite range was formed, and this is admirably done.

In the middle of the valley, terraces and streams.
